

## How do we get a level 4 on our procedures?

Show your reader that you have thoughtfully designed an investigation to test your hypothesis. Someone else can easily repeat your investigation exactly as you performed it.

Your procedure is:

- Numbered
- In a logical & sequential order
- Contains objective details that make it easy for someone else to repeat

Include details about:

- Your independent variable
- The levels of your independent variable
- Your constant variables
- How you will measure your data using your dependent variable
- Explain how many trials you will perform
